

## Contract renews support to intelligence center analysts

by *Fran Crumb, Information Directorate*

ROME, N.Y. — The Air Force Research Laboratory Information Directorate recently awarded a \$7,687,300 contract to PRC Inc. of Dayton, Ohio, to provide research and development engineering expertise to the National Air Intelligence Center (NAIC) at Wright-Patterson AFB, Ohio.

The five-year contract, "Automated Virtual Information Production Support System," contains options that could increase the value of the agreement to nearly \$30 million.

"We will be building on work that we started with NAIC under a previous four-year contract with PRC," said Dennis R. Nawoj, program manager in the directorate's Information and Intelligence Exploitation

Division. "We will be responding to customer requirements by providing automated support to intelligence center analysts and easily accessed virtual intelligence products to operational facilities worldwide.

"The objective of the PRC effort is to design, develop, implement and maintain information systems, applications and databases, as well as to infuse appropriate technologies to support the generation of new intelligence products," Nawoj said. "This will provide much greater access to information needed for analysis and produce new capabilities to manipulate information and rapidly visualize the results." @
